

IMPORTANT

PLEASE READ BEFORE FITTING COMPONENTS

When replacing common rail components, it is extremely important to check the complete fuel system for contamination prior to fitment of the new components.

We recommend following the below steps prior to fitment to ensure there are no reoccurring issues with your fuel system

- Find the cause of the component failure prior to installing
- Replace fuel filter with new genuine filter assembly
- Check the fuel system for contamination and clean system thoroughly prior to fitment.
- If the vehicle has a performance chip fitted or ECU flash this may void warranty if rail pressure exceeds the OEM specifications.
- Components must be fitted as per manufactures repair manual.
- Some injectors may require the compensation codes entered into the engine ECM.

Cairns Diesel Service will not cover warranty if the component is contaminated, damaged or broken.

Authorised Service Dealer: **DFI:** Bosch, Zexel, Denso, Delphi, Stanadyne **TURBOS:** Garrett, Borg Warner, IHI, Holset, Mitsubishi

Cairns Diesel Service is a Capricorn Supplier and RACQ Authorised Repair Centre
